

1000 Series E-mag Ultimate Transom Closer

ULTIMATE TRANSOM CLOSERS COMPLETE WITH ARM SET & BOTTOM PIVOT

The Exidor E-mag Ultimate transom closer offers a neat, aesthetically pleasing way to control door opening. They are particularly popular where a discreet closer is required, and are widely used in hospitals, universities and public buildings. Suitable for both internal and external doors, the closer can be used with aluminium, timber and hollow metal doors and frames, and comes with an adjustable floor pivot.

It is a fixed power size 4 which allows the door to be opened with little resistance from the closer. However, when the buildings fire alarm is activated, power is cut to the unit and the closer then shuts the door. Available in double action, the transom closer can be supplied complete, or mechanism only when being used as a replacement. Optional extras include end load arm and extra height floor pivot.
