

299 Dogging Device

For use with the Exidor panic bolt and Pullman latch ranges, a dogging device is available as an accessory (Exidor 299). The dogging device allows the bolts to be withheld in the retracted position ensuring the automatic top trip catch or Pullman latch do not engage when the door is closed.

299

304 Alarm Unit

For use with the Exidor panic bolt and Pullman latch ranges, the alarm is activated when the panic device is operated or an attempt is made to remove the cover, and de-activated by a key. The unit is powered by a 9v battery.

314 Vertical Pullman Latch Kit

315 Horizontal Pullman Latch Kit

The Exidor Pullman latch kits can be supplied for any of the Exidor panic bolt range to upgrade a unit, and are suitable for doors that are subject to a high volume of traffic, or when a higher level of security is required.

The Pullman latches are available in both vertical and horizontal versions and provide a smooth and quiet alternative to the traditional top trip catch. They are recommended for interconnecting doors as well as external doors. The level of security is increased as the latches operate independently and yet they maintain the emergency facility in that they are retracted in one action by the cross bar, push pad or touch bar when required. The Pullman latches are housed in an enclosed keep and are designed so that they can only be attacked by going through the door. However, due to the design, the latch will throw outwards rather than retract if attacked, thus increasing security.
